

Sun offers a general purpose handknob control with panel mount nut for use in systems where the cartridge needs to be panel-mounted and frequent adjustments are necessary. The handknob components are added to the basic L control and an external thread is added to the cartridge body. Cartridges may be ordered in this configuration from Sun by specifying an O control in the model number. Sun repair kits are also available.

NOTES: • Only for cartridges date stamped '41' or later and originally supplied with plastic knobs. Lock knob snaps onto locknut furnished on cartridge.
