Direct-acting, pressure reducing/relieving valve

# CAPACITY: 20 gpm / CAVITY: T-2A

sunhydraulics.com/model/PRFB

Direct-acting, pressure reducing/relieving valves reduce a high primary pressure at the inlet (port 2) to a constant reduced pressure at port 1, with a full-flow relief function from port 1 to tank (port 3). These valves incorporate a damped construction for stable operation allowing the use of high reduced pressure.

## **TECHNICAL DATA** NOTE: DATA MAY VARY BY CONFIGURATION. SEE CONFIGURATION SECTION.

Cavity	T-2A
Series	2
Capacity	20 gpm
Maximum Operating Pressure	5000 psi
Factory Pressure Settings Established at	0.25 gpm
Maximum Valve Leakage at 110 SUS (24 cSt)	3 in³/min.
Adjustment - No. of CW Turns from Min. to Max. setting	5
Valve Hex Size	1 1/8 in.
Valve Installation Torque	45 - 50 lbf ft
Adjustment Screw Internal Hex Size	5/32 in.
Locknut Hex Size	9/16 in.
Locknut Torque	80 - 90 lbf in.
Model Weight	0.79 lb.
Seal kit - Cartridge	Buna: 990-202-007
Seal kit - Cartridge	Polyurethane: 990-002-002
Seal kit - Cartridge	Viton: 990-202-006

#### OPTION SELECTION EXAMPLE: PRFBLAN

CONTROL	(L)	ADJUSTMENT RANGE	(A)	SEA	AL MATERIAL	(N)	MATE	ERIAL/COATING
<ul><li>L Standard Screw Adjustment</li><li>C Tamper Resistant - Factory Set</li></ul>		A 750 - 3000 psi (50 - 210 bar), 100 psi (70 bar) Standard Setting	00	N E	Buna-N EPDM		/AP	Standard Material/Coating Stainless Steel, Passivated
<b>K</b> Handknob		<b>B</b> 300 - 1500 psi (20 - 105 bar), 500 psi (35 bar) Standard Setting	)	٧	Viton		/LH	Mild Steel, Zinc-Nickel
		<b>D</b> 200 - 800 psi (14 - 55 bar), 400 p (28 bar) Standard Setting	si					
		E 100 - 400 psi (7 - 28 bar), 200 psi (14 bar) Standard Setting	i					
		<b>S</b> 50 - 200 psi (3,5 - 14 bar), 100 ps (7 bar) Standard Setting	Sİ					
		W 1000 - 4500 psi (70 - 315 bar), 1000 psi (70 bar) Standard Settin	ıg					

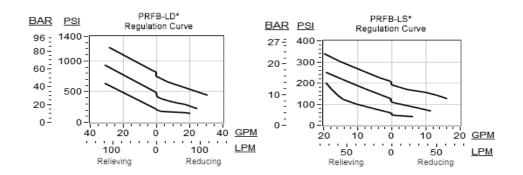

### **TECHNICAL FEATURES**

- Pressure at port 3 is directly additive to the valve setting at a 1:1 ratio and should not exceed 3000 psi (210 bar).
- Leakage specified in Technical Data is out of port 3 with a supply pressure of 2000 psi (140 bar) and the valve set at mid range. This leakage is directly proportional to pressure differential and inversely proportional to viscosity expressed in centistokes.
- All three-port pressure reducing and reducing/relieving cartridges are physically interchangeable (i.e. same flow path, same cavity for a given frame size). When considering mounting configurations, it is sometimes recommended that a full capacity return line (port 3) be used with reducing/relieving cartridges.
- Full reverse flow from reduced pressure (port 1) to inlet (port 2) may cause the main spool to close. If reverse free flow is required in the circuit, consider adding a separate check valve to the circuit.
- All spring ranges are tested for correct operation with 5000 psi (350 bar) inlet pressure.
- Suitable for accumulator circuits since the absence of pilot control flow results in reduced secondary circuit leakage.
- Direct acting concept provides highly reliable operation in contaminated systems, especially at dead headed conditions.
- Unlike pilot operated versions, direct acting valves exhibit a transitional step between reducing and relieving modes. This step equals 5% of the high end of the adjustment range, independent of the valve setting. Therefore, these valves may not be suitable for counterbalancing applications.
- Direct operated version offers superior dynamic response compared to equivalent pilot operated models.
- Incorporates the Sun floating style construction to minimize the possibility of internal parts binding due to excessive installation torque and/or cavity/cartridge machining variations.
