

Air-controlled, pilot-operated, balanced piston sequence valve

CAPACITY: 60 gpm / CAVITY: T-17A

sunhydraulics.com/model/RSHE

Air-controlled, pilot-operated, balanced piston sequence valves use compressed air over a diaphragm instead of an adjustable spring to control the pressure setting of the valve. The air signal is supplied through a port in the hex-end of the cartridge. They will supply a secondary circuit with flow once the pressure at the inlet (port 1) has exceeded the valve setting. The pressure setting of a sequence valve controls the pressure at port 1 relative to the pressure at the drain (port 3). These valves are insensitive to back pressure at port 2 (sequence), up to the valve setting. They may be used to regulate pressure in place of 2-port relief valves if there is pressure in the return line.

TECHNICAL DATA NOTE: DATA MAY VARY BY CONFIGURATION, SEE CONFIGURATION SECTION.

Maximum Operating Pressure	2000 psi
Pilot Ratio	20:1
Factory Pressure Settings Established at	4 gpm
Maximum Air Pressure	150 psi
Maximum Valve Leakage at 110 SUS (24 cSt)	4 in³/min.
Response Time - Typical	10 ms
Seal kit - Cartridge	Buna: 990-017-007
Seal kit - Cartridge	Polyurethane: 990-017-002
Seal kit - Cartridge	Viton: 990-017-006

CONFIGURATION OPTIONS CONTROL

Model Code Example: RSHEBBN

(B) ADJUSTMENT RANGE

(B) SEAL MATERIAL

(N)

B External 4-SAE Port

B 50 - 1500 psi (3,5 - 105 bar)

N Buna-N

V Viton
